Terrain is on rolling terrain with native grass and sagebrush. Dirt berm will be placed on South and West side of location to protect a shallow surface water depression which is dry with no running water, located 203' South of well pad. Surface Roughening will be used on low side of drill site to reduce speed of runoff, increase infiltration, reduce erosion, trap sediment and prepare soil for reseeding. Mud and Water Pits will be reclaimed within 6 months weather permitting. Topsoil will be separated and spread on drill site as final operation before reseeding operations.
