Hoshiko 2-2 ~ NWNE S2, T4N, R64W ~ API # 05-123-13273 ~ Remediation #7838 and Remediation #4239

COGCC has reviewed the Form 27 submitted by Noble and concurs that no further action appears to be necessary at this time. However, should future conditions at the site indicate contaminant concentrations in soils exceeding COGCC standards or if ground water is found to be significantly impacted, further investigation and/or remediation activities may be required at the site. The Remediation Number (7838) has been closed in the COGIS database (document #200382471). A copy of the approved Form 27 is attached for your records. Please retain a copy of this email as verification of release closure of Remediation #7838.

During the review of the environmental documents for this facility, it came to the attention of the COGCC that an open remediation project for the same facility (REM #4239) exists and requires followup by PDC. Please submit a status of the project to within 30 days to annie.eckman@state.co.us.

Thank you,

Form 27 No Further Action Submittal

Hi Bob,

Attached is a Form 27 No Further Action and supporting documentation for the above referenced subject site. A soil sample was collected below a concrete produced water vault during removal activities. No petroleum hydrocarbons were detected in soil above COGCC soil limits. Groundwater was not encountered during excavation activities. Based on laboratory analytical data, PDC is requesting a No Further Action determination as part of the removal of the concrete produced water vault.

Thank you and please feel free to get a hold of me if you have any questions.
