Jacob,

COGCC has reviewed the Form 27 Site Investigation and Remediation Workplan for the Dyer USX AB 35-67-1HN location submitted by Noble Energy, Inc. on June 10, 2013. Based on the information presented, it appears that no further action is necessary at this time, and COGCC approves the closure request. However, should future conditions at the site indicate contaminant concentrations in soils exceeding COGCC standards or if ground water is found to be significantly impacted, then further investigation and/or remediation activities may be required at the site. The Spill report #2145128 and Remediation Project #7849 have been changed to resolved status in the Colorado Oil & Gas Information System. Reclamation of the affected cropland must be performed in accordance with the 1003 Interim Reclamation Rule.

Please contact me with any questions regarding this release.
