#### COMMENTS:

The well was plugged on May 27, 1958 and reclaimed thereafter. Specific reclamation procedures are unknown by current Apache personnel. However, the site is currently vegetated and does not appear to pose an erosional hazard. Aerial orthophotos as far back as 1989 show evidence that the site was re-vegetated with a total percent plant cover matching that of the surrounding area. The site was viewed at a distance from the county road and appears to generally blend into the natural contours of the hillslope. There does appear to be a small area that is not fully revegetated and may be the result of a small cut into the hillslope, however it is minimal in size and more damage may be done to the larger area in an attempt to blend and reseed this small portion. The land owner would prefer to leave the site as is and has signed a Surface Release (See Attachment).
