Good Morning,

I have checked our well log files and indeed the well Garden Creek #32-07M well API 123-34636 was not cored. Previous to the Garden Creek #32-07M, a well had been cored. Subsequently, that wells core header had not been reformed and was mistakenly copied into the core header for the well Garden Creek #32-07M. Yet, rest assured the well Garden Creek #32-07M was not cored.

Best regards,

I believe Phillip has all the well information on that one. I am trying to remember the well but don't at this time I just looked up my wells for EOG in Niobara and don't have the well. Is it archived? If it is an monitoring well then I would think they cored it but do not recall coring out there.

Steve

Phillip, Steve S.-

As you may recall I was "tight holed" on these EOG wells, so could either of you check on this?

Apparently, our geology says it was cored, but EOG's records say it was not.

Subject: Request for information regarding EOG Garden Creek #32-07M

Good Afternoon,

I am trying to figure out if EOG cored the Garden Creek #32-07M well API 123-34636. According to the mud log created by Goolsby it appears that the well was indeed cored. Can you please verify whether or not this well was cored.

Thank you,
