Cheryl,

I have reviewed the referenced Form 2A Oil & Gas Location Assessment and have the following comment.

In the Soils section you have correctly listed the two NRCS Soil Map Units that your proposed oil and gas location will disturb. They are the 34-Kim loam 5-9% slopes and 47-Olney fine sandy loam 1-3% slopes. However the NRCS Map Unit Description attachment contains the 34-Manter sandy loam 0-6% slopes and 47-Otero sandy loam 3-9% slopes. Please provide me with the correct NRCS Map Unit Descriptions and I will replace them on the Form 2A.

If you have any questions, please feel free to contact me. Thank you.

Attached is the correct NRCS Descriptions. The system was down the day we were submitting them and we cut and pasted out of the 100 year old NRC Map Book and really messed it up.
