Operator Comments:

Oxy has completed reclamation of the above-mentioned reserve pit and requests to apply a different standard (see table on next page) to the COGCC Table 910-1 concentration levels for Arsenic (As), based on post reclamation, mixed pit contents, and cap sample As levels being below undisturbed background levels. Oxy's sundry requests to waive the COGCC Table 910-1 concentration for As. In this particular situation, the post reclamation samples (06/25/2013, and 06/26/2013), mixed pit contents (07/10/2013), and cap samples (07/24/2013), As concentrations are above COGCC table 910-1 standards, but are below undisturbed background levels (see sampling locations on included location maps).

The sampling method Oxy employed was to take a representative random grab sample for each background sample location. The analytical concentration tables identify the COGCC Table 910-1 concentration levels, Oxy's undisturbed background concentrations, Oxy's post reclamation concentrations. Based on the background sample concentrations, Oxy's sundry notice requests to apply different standards to the COGCC Table 910-1 concentration levels in regards to As.

To address elevated concentrations of SAR, Oxy capped the pond with at least three feet of native material to ensure a sufficient agronomic zone. The reclaimed pond was contoured to be level with the pad grade to minimize stormwater runoff. Final pad reclamation will occur at the end of the life of pad, which will be utilized as a storage area until final pad reclamation.

I hereby certify all statements made in this form are, to the best of my knowledge, true, correct, and complete.
