Scott,

I have reviewed the referenced Form 2A Oil & Gas Location Assessment and have a few comments.

1) Per COGCC Rule 303.b.(3)C, a description of all oil, gas, and/or water pipelines is required to be included in the Facilities section of the Form 2A. Please provide me with the number, size and material of all pipelines planned for this oil and gas location.

2) During my review, I identified on the USGS Topographic Map and aerial photos an intermittent pond located approximately 2,880 feet northwest and topographically downgradient of this oil and gas location. Therefore, I will change the Water Resources section of the Form 2A to reflect this distance to the nearest surface water feature.

3) While the correct NRCS Soil Map Unit Name was listed in the Soils section of the Form 2A, the required NRCS Soil Map Unit Description attachment was not included with the Form 2A. Please provide me with the NRCS Soil Map Unit Description for the 54 Platner loam, 0-3 percent slopes and I will add it to the Form 2A.

4) Location Pictures for the oil and gas location are required but were not included. Please provide me with the missing Location Pictures attachment and I will add it to the Form 2A.

Please respond to these requests by December 14, 2013. If you have any questions, please feel free to contact me. Thank you.

Doug:

For this facility, there will be three 3 inch welded schedule 80 steel line pipes coming into the separators.

Coming off the separators (total for location):

Three 2" FDR7 poly lines for water to water tank

Three 3" threaded schedule 80 steel dump lines for oil to oil tanks

1 main gas line: 3" welded schedule 80 steel

See attached NRCS Soil Map Unit Description and Location Photos.

Please advise if I've addressed all of your items listed below.

Thanks,

Scott Ryan, *RPL*
