RECLAMATION**INTERIM RECLAMATION**

☐ Interim Reclamation will commence approximately _____

Per Rule 1003.e.(3) operator shall submit Sundry Notice reporting interim reclamation is complete and site is ready for inspection when vegetation reaches 80% coverage.

☐ Interim reclamation complete, site ready for inspection.

Per Rule 1003.e(3) describe interim reclamation procedure in Comments below or provide as an attachment and attach required location photographs.

Field inspection will be conducted to document Rule 1003.e. compliance

FINAL RECLAMATION

☐ Final Reclamation will commence approximately _____

Per Rule 1004.c.(4) operator shall submit Sundry Notice reporting final reclamation is complete and site is ready for inspection when vegetation reaches 80% coverage.

☐ Final reclamation complete, site ready for inspection. Per Rule 1004.c(4) describe final reclamation procedure in Comments below or provide as an attachment.

Field inspection will be conducted to document Rule 1004.c. compliance

COMMENTS:

This Sundry is in response to a October 31, 2013 phone conversation between Mark Weems, Coy Bryant, and Andy Antipas. The HD-3 well has elevated annulus pressure that is consistent with the tubing pressure. In addition, there is zero pressure on the bradenhead. Both of these facts supports the conclusion that there is a suspected leak either in the production tubing or packer, not in the production casing. As illustrated in the attached well bore diagram, the well construction consists of chrome production casing and chrome tubing. Many of Kinder Morgan's CO2 wells are tubingless completions. The chrome production casing is utilized because of its corrosion resistance to carbonic acid in the CO2 gas stream, thus protecting the mechanical integrity of the wellbore. Therefore, Kinder Morgan has no plans to work over this well. Kinder Morgan will continue to monitor bradenhead, casing, and tubing pressures on a monthly basis.
