RE: Request to Test Water Well

To whom it may concern:

The purpose of this letter is to advise you that Noble Energy, Inc. (Noble) has permitted, or is in the process of permitting an oil and gas well in the vicinity of your property near the intersection of Weld County Road (WCR) 36 and WCR 57.

As part of Noble's due diligence process, Noble requests access to your livestock water well to obtain a baseline water sample and subsequent samples following completion of Noble's oil and gas well. The baseline water sampling is intended to document the pre-existing conditions of water accessible from your well. Subsequent water well sampling is intended to document conditions of water accessible from your well post-completion of Noble's oil and gas well. The data associated with the baseline water sample will serve as a comparison point for subsequent water well sampling conducted by Noble in the future.

To complete both baseline and subsequent water well sampling, Noble has contracted with LT Environmental, Inc. (LTE). If you consent to both baseline and post-completion sampling, LTE will access your property to obtain samples from your stock water well, which is known as the Well Receipt No. 9058965, located in SESW Quarter, Township 3 North, Range 63 West, Section 17. These samples will be provided to an independent laboratory for analysis. The costs for sampling and testing will be paid by Noble. By signing the enclosed postcard, which authorizes both the baseline and subsequent sampling and testing, you are recognizing that analytical results from your water will be uploaded in a public database operated by the Colorado Oil and Gas Conservation Commission and that your water well may be inoperable for approximately one hour during testing.

Please indicate either of the options noted on the enclosed postcard, then sign and mail the postcard with pre-paid postage, to LTE, at the indicated address. Your prompt response to this request is greatly appreciated. Once LTE receives your consent, you will be contacted by LTE to schedule a mutually agreeable time to test your water well.

If you have any questions or concerns regarding the water well sampling on your property, please feel free to contact Asher Weinberg with Noble at (303) 228-4000.

Kind Regards,

LT Environmental, Inc.
