### **Best Management Practices**

#### **No BMP/COA Type**

#### **Description**

1	Planning	Share/consolidate corridors for pipeline ROWs to the maximum extent possible. Maximize the utility of surface facilities by developing multiple wells from a single pad (directional drilling), and by co-locating multipurpose facilities (for example, well pads and compressors) to avoid unnecessary habitat fragmentation and disturbance of additional geographic areas. Use existing roads where possible. Maximize use of long-term centralized tank batteries to minimize traffic. Maximize use of remote telemetry for well monitoring to minimize traffic .
2	Pre-Construction	WPX Energy will ensure 110 percent secondary containment for any volume of fluids contained at well site during drilling and completion operations. WPX Energy will implement best management practices to contain any unintentional release of fluids. Either a lined drilling pit or closed loop system will be implemented.
3	Interim Reclamation	Use only certified weed-free native seed in seed mixes, except for non-native plants that benefit wildlife. WPX Energy will use certified, weed free grass hay, straw, hay or other mulch materials used for the reseeded and reclamation of disturbed areas. Install exclusionary devices to prevent bird and other wildlife access to equipment stacks, vents and openings. Reduce visits to well-sites through remote monitoring (i.e. SCADA) and the use of multi-function contractors.
