Livestock: <u>Unknown</u> Water wells: <u>2,960 NE</u> Depth to shallowest ground water: <u>Unknown</u>	
Cause of spill (e.g. equipment failure, human error, etc.): <u>Extreme Weather - Flood conditions along the St. Vrain Creek</u>	
Detailed description of the spill/release incident: Floodwaters inundated the site, causing the condensate tank to overturn and the drain valve to fail. The failed valve allowed an unknown volume of condensate to release to the St. Vrain Creek. The volume of the release will be determined once the contents of the failed tank can be assessed and the volume will be provided on a Form 27.	

CORRECTIVE ACTION

Describe immediate response (how stopped, contained and recovered): The release could not be controlled, as the site was inaccessible due to the flooding. Once the floodwaters receded enough to allow safe access, absorbent and containment booms were deployed at the site on September 17, 2013.

Describe any emergency pits constructed: NA

How was the extent of contamination determined? A sampling and analysis plan will be developed once the floodwaters recede.

Further remediation activities proposed (attach separate sheet if needed): Will be provided on a Form 27.

Describe measures taken to prevent problem from reoccurring: Not applicable (weather/flooding).
