## OPERATOR COMMENTS AND SUBMITTAL

Comments Nearest above ground utility is 310 ft. from the site. Nearest property line is 330 ft. Nearest building is over one mile from site. This well is currently a shut-in J Sand producer in the Adena J sand Unit. Plan to convert the well to a J Sand injection well for pressure maintenance and water flood sweep puposes. Plan to MIT the casing to confirm casing integrity, set an injection packer and inject into the current J Sand perforations. A Form 2A is not required for this recompletion because no pit will be constructed and there will be no surface disturbance beyond the originally disturbed area. No conductor casing was set when the well was drilled; the casing consists of surface casing and a production string. A Form 33 (Injection Permit) is being submitted concurrently with this application.

This application is in a Comprehensive Drilling Plan \_\_\_\_\_ CDP #: \_\_\_\_\_

Is this application being submitted with an Oil and Gas Location Assessment application? No
