

605-01 (Rock Springs) 2013 Monitoring Summary

12/31/2013

1.0 Location:

OXY USA WTP LP (Operator # 66571)
760 Horizon Dr., Ste. 101
Grand Junction, CO 81506

605-01 (Location ID 323903)
T6S, R97W, S5, SWNW
Garfield County, Colorado

2.0 Overview:

This report summarizes the 2013 quarterly monitoring event for the release at OXY USA WTP LP's (OXY) Cascade Creek 605-01 well pad; refer to Colorado Oil and Gas Conservation Commission (COGCC) Document #200220428 and Remediation project #4622. The well pad is situated adjacent to an unnamed tributary of Crystal Creek. The release extended from the production pit to springs west of the pad (locally known as Rock Springs) which feeds the tributary. The well pad and the area upon which the release occurred and surfaced are located on property owned by OXY.

The 605-01 vicinity water sources have been monitored monthly from June 2008 through October 2011 when water and access was available. Sampling frequency was modified to a quarterly sampling regime beginning in 2012.

Sampling Point #42 exceeded the maximum concentration level (MCL) for benzene (5.0 µg/L) during the second quarter sampling event. No other exceedances of the respective MCLs for benzene, toluene, ethylbenzene, or xylene (BTEX), total dissolved solids (TDS), or gasoline range organic compounds (GRO) were identified during the 2013 sampling events.

3.0 Water Monitoring and Results:

Quarterly sampling events were conducted during 2013 on the following dates at sample locations 40, 42, 43, and 44:

- o March 26, 2013
- o May 8, 2013
- o August 15, 2013
- o October 18, 2013

Sampling was conducted at four of the approved sampling locations; North Spring (sampling point #40), South Spring (sampling point #42), Downstream (sampling point #43), and the Lower Pit (sampling point #44).

A summary of analytical results during the last five quarters of the four sampling points are shown in Table 1. A summary by location for the history of the release are presented in the attached Comprehensive Laboratory Data Summary by Location table and attached to this report. Graphical summaries of BTEX concentrations for sampling locations 40, 42, 43, and 44 are summarized and attached to this report. The four sample locations and the historical upstream sample location are identified on the attached figure.

Table 1. Summary of 605-01 Monitoring Results from 4th Quarter 2012 through 4th Quarter 2013

Location / Date	Benzene (MCL= 5.0 µg/L)	Toluene (MCL= 560 to 1000 µg/L)	Ethylbenzene (MCL= 700 µg/L)*	Xylenes (MCL= 1400 to 10000 µg/L)*	GRO (mg/L, No MCL)	TDS (MCL = 750 ppm)**

Notes: µg/L – micrograms per liter
 GRO – gasoline range organics
 TDS – total dissolved solids
 MCL – Maximum contaminant level
 ppm – parts per million
 * – the highest number within the range is the MCL
 ** – 1.25 x 600 ppm detected at location #12 on February 12, 2009
 Q1/Q2/Q3/Q4 – indicates quarterly sampling interval
 D – indicates duplicate sample analyzed by ESC laboratory
 S – indicates duplicate sample analyzed by separate laboratory

4.0 Quality Control:

A formal sampling and analyses plan has not been prepared for this event. OXY has collected duplicate samples, split samples, and a trip blank for quality control (QC) purposes to determine the adequacy of field and laboratory methods. Duplicate and split samples were collected at sampling points #40, #42, #43 and #44.

All QC samples collected and analyzed during the 2013 sampling events were shown to be “non detect” for BTEX except for the split sample for location #42 (South Spring) during the third quarter 2013. The single detection for benzene was at 1.0 microgram per liter which is at the published detection limit for both laboratories for that location. The detection is unlikely to be significant due to the low concentration identified by the laboratory.

The trip blank samples collected and analyzed during the 2013 sampling events were identified to contain no detectable petroleum hydrocarbons of interest.

5.0 Conclusions:

2013 sample collection identified an exceedance of the benzene standard at the South Spring (#42) location during the second quarter of 2013. No other exceedances of BTEX constituents were identified during the 2013 sampling events. The COGCC has not established an MCL for GRO; however, the GRO results are used as a comparative indicator for the presence of low-fraction petroleum hydrocarbons and of remediation progress. GRO was detected in the South Spring location during the second quarter 2013 sampling event. The sample's GRO concentration was identified to be at low concentrations. All other analytes during the sampling events were below analytical detection limits.

Separate graphs of analytical results from the past year (five sampling events) are attached to this report. Analytical detection limits denoted with a less-than sign (<) in Table 1 are below allowable MCLs and appear to show an upward trend. Decreased laboratory sensitivity in analytical methods has been noted to contribute to the upward graphical trend, but is unlikely to be indicative of an increased trend of BTEX constituents at the sample locations during this reporting period.

Notes: µg/L - micrograms per liter

mg/L - milligrams per liter

MCL - maximum contaminant level

GRO - gasoline range organics

TDS - total dissolved solids

ppm - parts per million

*- the highest number within the range is the MCL

** - 1.25 x background measurement from Upstream location on 6/24/08 (600 ppm)

D - indicates duplicate sample

S - indicates split sample

Note S:

- EC - electroconductivity
- mmohs/ cm - millimhos
- TDS - total dissolved solids
- ppm - parts per million
- DO - dissolved oxygen
- mg/L - milligrams per liter
- ORP - Oxidation reduction potential
- mV - millivolts
- NA - Indicates field instrument malfunction
- Blank - Indicates no readings were taken
- D - Duplicate Sample
- S - Split Sample
- Bold - indicates parameter exceeds COGCC threshold value
