SPILL/RELEASE REPORT

This form is to be submitted by the party responsible for the oil and gas spill or release. Any spill or release which may impact waters of the State must be reported as soon as practicable; any spill over 20 bbls must be reported within 24 hours and all spills over five bbls must be reported within ten days. Submit a Site Investigation and Remediation

Livestock: <u>NA</u> Water wells: <u>~2,040 S</u> Depth to shallowest ground water: <u>~62'</u>	
Cause of spill (e.g. equipment failure, human error, etc.): <u>Equipment failure</u> Detailed description of the spill/release incident:	
A field operator noticed an area of staining on the ground surface around the wellhead. No standing fluids were observed, however the ground was saturated. The immediate area around the wellhead was hand excavated to a 1" steel flow line located approximately 3' below the ground surface. The line, which carries produced water to the produced water tank, had a small hole in it causing the release of fluids. It is assumed that the release may have occurred over a 15 day period as water strap measurements collected from the produced water tank did not indicate an increase in fluids over the previous 15 days. Historic daily production for the well is approximately 5.5 bbls a day	

CORRECTIVE ACTION

Describe immediate response (how stopped, contained and recovered): Upon discovery of the release, the line was isolated and production water was temporarily diverted. The compromised line will be hand excavated and replaced. All of the fluid released was contained to the immediate area around the well head. None of the fluids released migrated off of the well pad.

Describe any emergency pits constructed: None were constructed

How was the extent of contamination determined? Visual observations and field screen readings.

Further remediation activities proposed (attach separate sheet if needed): Remediation options will be determined pending analytical results and further site investigation. This is slated to take place in the spring of 2014.

Describe measures taken to prevent problem from reoccurring: Production lines and tanks will be tested on a more frequent basis. In addition, field personnel will notify the supervising staff when anomalies are noted in daily production volumes.
