Cause of spill (e.g. equipment failure, human error, etc.): <u>Human Error</u>		
Detailed description of the spill/release incident: During well completion activities, produced water was being transferred from the staging tanks to the working tanks. The transfer pump was left unattended, allowing the working tanks to overflow and release approximately 18 bbls of produced water onto the well pad surface. All released fluids were contained on the well pad.		

CORRECTIVE ACTION

Describe immediate response (how stopped, contained and recovered): The transfer pump was shut down and the inlet valves on the working tanks were closed. A hydrovac truck was used to recover the standing water, frozen water, and impacted surface soil. The remaining impacted soil will be excavated.
Describe any emergency pits constructed: <u>NA</u>
How was the extent of contamination determined? Confirmation soil samples will be collected from the excavation and the analytical results and excavation details will be provided on a Form 27.
Further remediation activities proposed (attach separate sheet if needed): Will be provided on a Form 27.
Describe measures taken to prevent problem from reoccurring: All contractors will be trained on transfer procedures to ensure that transfers are never left unattended.
