Provide a brief summary of the formation treatment: Open Hole: []

D sand perforated and acidized for conversion to a water injection well. Acid job was comprised of 750 gallons of 15% HCL and 250 gallons of 10% Acetic acid. Because the well is being converted to an injection well, there is no flowback associated with this acid job.

** Bridge Plug Depth: 5634 ** Sacks cement on top: 2 ** Wireline and Cement Job Summary must be attached.

Comment:

During this recompletion, the original J sand completion was abandoned beneath a CIBP and 2 sacks of cement, remedial cement was pumped from 251' to the surface (reported on Form 5), and the D sand was perforated in preparation for conversion of this well to an injection well in the D sand enhanced recovery unit that was approved under COGCC order 26-60 on May 21, 1990.

I hereby certify all statements made in this form are, to the best of my knowledge, true, correct, and complete.
