Comments:

Interim reclamation activities were conducted on the Durham 1-31/2-31 well pad location during autumn 2013. Interim reclamation activities consisted of compacting berms for stabilization and reworking stormwater containment sediment catches. Activities also consisted of some surface roughening techniques on cut and fill slopes to enhance water capture and minimize erosion potential, in preparation of hydroseeding.

On October 30, 2013, hydroseeding and hydromulching with Flexterra was conducted on the cut and fill slopes on the well pad location and along the access road leading to the well pad. Hydroseeding application used a seed mix approved by the Routt County Conservation District for non-crop lands, RCCD #1 seed mix. RCCD #1 was applied on approximately 1 acre at an application rate of 48.4 PLS lb/acre for a total seed usage rate of 48.4 PLS lb.

Additionally, noxious weed mitigation was also conducted in September 2013 at the Durham 1-31/2-31 location to inhibit future noxious weed growth and infestation. Ongoing monitoring will be conducted in 2014 to determine the effectiveness of the autumn 2013 interim reclamation and noxious weed mitigation measures.
