Danny,

Cindy,

Thanks for the call. This will not impact the cementing COA's on the APD. But it could impact what formations have to be permitted (whatever is below the packer or the 3-1/2" PBR in this case). I am copying Bob so he'll have the most recent wellbore. You may proceed with the revised plan.

Thank you,

Dirk Sutphin, P.E.

Dirk,

I have attached the updated schematic showing what we propose to do in the next day or so with running the liner hanger over the injection interval with the drilling rig.

Please feel free to call me on my cell whenever. Thanks
