Attn: Mr. Lepore, Director

Bill Barrett Corporation (“BBC”) respectfully requests the Director to approve an exception to Rule 317.o and only run an LWD gamma ray log in the horizontal section of the above stated wells on the same well pad. Rule 317.o of the Colorado Oil and Gas Commission’s Rules and Regulations requires wells to be logged with a minimum of a resistivity log with gamma-ray. The above-named wells are requested to be exempt from this requirement due to the proximity of existing well(s) with acceptable resistivity logs with gamma ray. The available log(s) are within the commissions accepted tolerance of the vertical section of the above stated wells

The proposed wells will be logged with an LWD gamma ray log in the horizontal section. The wells will also be cased-hole logged with a cement bond and gamma ray log from the production casing shoe to the surface. The Drilling Completion Report – Form 5 submitted for each well will indicate that no open-hole logs were run.

The existing well(s) within 660 feet with acceptable resistivity logs with gamma ray are listed in the table below:

Well Name	Well Number	API Number	COGCC Well file document number
State A	4	05-001-06810	913973

Should you have any questions, please contact our office. Thank you for your consideration.

Sincerely,

Mary Pobuda  
Permit Analyst
