Inspector Comment:

There is an unlabeled and unbermed blowdown tank connected to the wellhead on the Jaques #5F via a flexible hose. This tank will need to be removed as soon as well maintenance operations have been completed; or have proper labeling (per 210.d.) and adequate berming installed (per 604-2.G.) per facility installation requirements. Temporary berming can be utilized, but must meet capacity requirements. There is one exception to this rule; tanks holding produced water that contains less than 3500 mg/l total dissolved solids becomes exempt from this berming requirement.
