The date of the discovery was 4/21/2014. There was a leak on a produced water injection pipeline associated with the F. Wilson 21 produced water injection well. An estimated 6-8 bbls of produced water was discovered just off the F. Wilson 21 location. The leak of the produced water resulted in minor erosion and saturated surface soil.

### CORRECTIVE ACTION

Describe immediate response (how stopped, contained and recovered):

Shut in the F Wilson 21 injection well, which was feeding the leak. Cleaned up 1 bbl of standing water and fenced the area.

Describe any emergency pits constructed:

No pits have been constructed.

How was the extent of contamination determined:

Visual.

Further remediation activities proposed (attach separate sheet if needed):

Allow the remaining surface produced water and saturated surface soil to evaporate and dry out.

Describe measures taken to prevent problem from reoccurring:

The line will be excavated and a determination on repairing or replacing the line will be made at that time.
