#### COMMENTS:

The intermediate casing setting depth has been revised from 5800 ft to 3200 ft as we are intending to produce from the first set of Dakota (3335 ft MD / 3215 ft TVD) and Entrada (3860 ft MD / 3688 ft TVD) reservoirs. The original plan was to set intermediate casing through these zones, but now it will be set above the Dakota and into the Greenhorn formation. Our directional plan has been revised too, which reflects the change in TD now at 7798 ft MD / 7211 ft TVD.
