Form 27 # 2148912 Conditions of Approval

Dave,

COGCC has assigned Remediation # 8425 and Document # 2148912 to the Form 27 for skim pit removal at the Gulley #1 lease. Please reference these numbers in future correspondence.

Although the reported concentrations of a sample collected from the skim pit were below COGCC Table 910-1 standards, oil and oily soil were in the skim pit and a stockpile of oily soil was documented in inspection # 673700931. Oily soil was observed in the backfill soil and documented in inspection #670600301. The form is approved with the following conditions:

Excavate all visibly stained oily soil. Following the removal of oily soil, collect a *minimum* of five confirmation soil samples -one from the pit bottom and one from each sidewall. Submit the samples to a laboratory for Total Petroleum Hydrocarbons (Diesel Range Organics and Gasoline Range Organics) analysis to verify compliance with Table 910-1. Provide an analytical summary sheet/table comparing confirmation sample results to Table 910-1 Standards. Provide photographs of the excavation. Provide a drawing that shows the an outline of the excavation with dimensions and depth. Provide the full laboratory analytical report. Provide disposal documentation.

A copy of the signed form is attached for your records. Feel free to call or email if you have questions or concerns.

Thank you,

John Noto

Cc: Remediation #8425
