Stenzel 1-31 ~ NENW S31-T5N-R65W ~ API #05-123-13295 ~ Remediation Project #8258

Paul,

The COGCC has approved the Form 27 submitted for the above referenced facility. The remediation plan for excavation of soil impacts resulting from Spill #2146353 is approved with the following conditions.

- COGCC Rule 909(b)(2) requires that sampling and analysis be conducted to determine the horizontal and vertical extent of contamination and that remaining soil does not exceed the concentrations in Table 910-1. Compliance with Table 910-1 can only be met with analysis conducted by an accredited lab, field screening samples do not meet that requirement and a single sample is not adequate to confirm the horizontal and vertical extent of the contamination has been removed. Therefore additional subsurface soil samples on the approximate, east, west, and south edges of the former excavation, from native soil, must be collected. An additional sample must be taken below the elevation of the base of the excavation. All samples shall be analyzed for BTEX, TPH-GRO, and TPH-DRO.
- At the conclusion of monitoring, submit a Sundry Form 4, notice of work complete, and submit the results with a request for no further action.

Please reference Remediation Project #8258 when submitting future correspondence and data. A copy of the approved form and conditions are attached. Please contact John Axelson or Chris Canfield with any questions.

Kirsten Derr, for

John Axelson, P.G.
