Describe what is known about the spill/release event (what happened -- including how it was stopped, contained, and recovered):

Sometime during the night on Monday 6/2/14 the water disposal injection meter unexpectedly malfunctioned and plugged off, causing the WD well to stop taking in water for injection. The WD tanks filled up and overflowed onto location into a depressed area of the location that acted like a trap. The water/oil did not leave location. Forest Management sucked up 120 bbls of liquid. The released amount of liquid mix looked to be approximately 119 bbls water & 1bbl of oil. The affected soil will be excavated and the area will be reclaimed and seeded with native species.
