Describe what is known about the spill/release event (what happened -- including how it was stopped, contained, and recovered):

Noble conducted site investigation activities within a former lined produced water pit located in the southwest portion of the facility. Three pot holes were advanced within the pit and soil samples were collected at various depth intervals. Analytical results indicate benzene, TPH (GRO/DRO), SAR and pH concentrations/levels in soils exceed COGCC Table 910-1 concentration levels. Additional investigation ongoing.
