Parachute, Colorado 81635

Subject: D-20 Soil Investigation

Dear Derek:

Nicholson GeoSolutions LLC was retained by Berry Petroleum Company (Berry) to conduct soil sampling at the site of a produced water and condensate leak on the D-20 well pad in the Garden Gulch area, Garfield County, Colorado. Upon discovery of the leak, an excavation contractor was immediately mobilized to the site to begin excavation of impacted soils and the well was shut in.

Nicholson GeoSolutions inspected the site on December 18, 2013. Impacted soil and rock had been excavated and stored in a bermed area on the well pad prior to the inspection. During the inspection the perimeter of the excavation was mapped using a hand-held GPS unit and five discrete soil samples were collected from the sidewalls and base of the excavation to evaluate compliance with COGCC standards (samples D20-C1 through D20-C5). In addition, a sample of the excavated spoils was also collected (D20-SPOILS).

Figure 1 shows the approximate extent and depth of the excavation and the locations of the five confirmation samples collected. The depth of excavation ranged from about 6 to 13 feet. All samples were analyzed for Total Volatile Petroleum Hydrocarbons (TVPH – gasoline range), Total Extractable Petroleum Hydrocarbons (TEPH – diesel range), BTEX (benzene, toluene, ethylbenzene, and xylenes), sodium adsorption ratio (SAR), pH, and conductivity. The spoils sample was also analyzed for metals and PAHs to evaluate compliance with the Table 910-1 standards and treatment options.

Table 1 provides analytical results for the soil samples collected. The laboratory analytical report is contained in Appendix A. All parameters for the five confirmation samples were below the COGCC standards, indicating that no further excavation is needed at this site. For the spoils sample, all results were below the standards, except for arsenic at 6.3 mg/kg.

Sincerely,

David K. Nicholson, P.G.
Nicholson GeoSolutions LLC

Table 1 D-20 Sample Results – December 18, 2013

Parameter	Table 910-1 Standards	D20-C1	D20-C2	D20-C3	D20-C4	D20-C5	D20-SPOILS

Attachment A
List of Analytes with QC Qualifiers

Sample Number	Work Group	Sample Type	Analyte	Run ID	Qualifier
L675407-06	WG698980	SAMP	Nitrobenzene-d5	R2871896	J1

Attachment B
Explanation of QC Qualifier Codes

Qualifier	Meaning
J1	Surrogate recovery limits have been exceeded; values are outside upper control limits

Qualifier Report Information

ESC utilizes sample and result qualifiers as set forth by the EPA Contract Laboratory Program and as required by most certifying bodies including NELAC. In addition to the EPA qualifiers adopted by ESC, we have implemented ESC qualifiers to provide more information pertaining to our analytical results. Each qualifier is designated in the qualifier explanation as either EPA or ESC. Data qualifiers are intended to provide the ESC client with more detailed information concerning the potential bias of reported data. Because of the wide range of constituents and variety of matrices incorporated by most EPA methods, it is common for some compounds to fall outside of established ranges. These exceptions are evaluated and all reported data is valid and useable "unless qualified as 'R' (Rejected)."

Definitions

- Accuracy - The relationship of the observed value of a known sample to the true value of a known sample. Represented by percent recovery and relevant to samples such as: control samples, matrix spike recoveries, surrogate recoveries, etc.
- Precision - The agreement between a set of samples or between duplicate samples. Relates to how close together the results are and is represented by Relative Percent Difference.
- Surrogate - Organic compounds that are similar in chemical composition, extraction, and chromatography to analytes of interest. The surrogates are used to determine the probable response of the group of analytes that are chemically related to the surrogate compound. Surrogates are added to the sample and carried through all stages of preparation and analyses.
- TIC - Tentatively Identified Compound: Compounds detected in samples that are not target compounds, internal standards, system monitoring compounds, or surrogates.

The data package includes a summary of the analytic results of the quality control samples required by the SW-846 or CWA methods. The quality control samples include a method blank, a laboratory control sample, and the matrix spike/matrix spike duplicate analysis. If a target parameter is outside the method limits, every sample that is effected is flagged with the appropriate qualifier in Appendix B of the analytic report.

Method Blank - an aliquot of reagent water carried through the entire analytic process. The method blank results indicate if any possible contamination exposure during the sample handling, digestion or extraction process, and analysis. Concentrations of target analytes above the reporting limit in the method blank are qualified with the "B" qualifier.

Laboratory Control Sample - is a sample of known concentration that is carried through the digestion/extraction and analysis process. The percent recovery, expressed as a percentage of the theoretical concentration, has statistical control limits indicating that the analytic process is "in control". If a target analyte is outside the control limits for the laboratory control sample or any other control sample, the parameter is flagged with a "J4" qualifier for all effected samples.

Matrix Spike and Matrix Spike Duplicate - is two aliquots of an environmental sample that is spiked with known concentrations of target analytes. The percent recovery of the target analytes also has statistical control limits. If any recoveries that are outside the method control limits, the sample that was selected for matrix spike/matrix spike duplicate analysis is flagged with either a "J5" or a "J6". The relative percent difference (%RPD) between the matrix spike and the matrix spike duplicate recoveries is all calculated. If the RPD is above the method limit, the effected samples are flagged with a "J3" qualifier.
