Waters of the State ☐ Residence/Occupied Structure ☐ Livestock ☐ Public Byway ☐ Surface Water Supply Area ☐*As defined in COGCC 100-Series Rules*

Describe what is known about the spill/release event (what happened -- including how it was stopped, contained, and recovered):

A Noble contracted water hauler connected their hose to the valve and nipple on the produced water vault to unload production fluids. The valve and nipple detached while the water hauler's hose was still attached, unintentionally releasing 233.5 bbls which was a mixture of oil and produced water into lined secondary containment. A steel ring and falcon liner prevented the production fluids from making contact with native soils. All 233.5 bbls of fluid were recovered by vac trucks, all pea gravel was removed, and the falcon liner will be sprayed off. Rohn State PC LD09-01 Tank Battery: API#05-123-33732
