

Geologist Information

General:	Existing location, 4 new wells (1 existing well)
Ownership:	WPX Surface, Fed Minerals
SUA Status:	Complete
Spacing Units:	1 spacing unit
Adjacent Owners:	BLM, Puckett, Encana

Plan of Development

Access: Use existing access.

Drilling: Efficiency Rig

Cuttings: On surface along west edge of pad.

SIMOPS: No

Completions: Frac on pad after rig leaves. Water supplied via 1-10" temporary surface line, tying in at the Man Camp Tee, as shown.

Flowback: On pad.

Production: Separators will be placed on pad on the south side of access road. Blowdown tank will be placed on pad on the north side of access road.

Pipeline: One new 8" gas will follow access road to below the GM 220-33 pad, then x-country to tie into existing 8". 1-4" water line and 1-2" condensate line will run with gas line, adding another 2" condensate line from the GM 220-33 pad, to the gas line tie-in. Then, the water and condensate will run southeast to the proposed tank pad. Finally, another 4" water line will run back to the northwest to tie into the existing water infrastructure near the GV 16-33A pad.

- Legend**
- Production Gas Well (Mesaverde)
 - Proposed Cuttings Management Area
 - Proposed Production Equipment Area
 - Proposed Daylight Line
 - Proposed Pad or Pit
 - Existing Overhead Electric
 - 4" Water & 2" Oil Pipeline
 - 4" Water Pipeline Only
 - Proposed Gas Line
 - WPX Water Line
 - WPX Gas Line
 - Frac Water Supply (Temp, Surface)
 - Parcel Ownership (from Garfield County)
 - Existing Road
 - Existing Pad
