Best Management Practices

No	BMP/COA Type	Description
1	Planning	<ul style="list-style-type: none">* Share/consolidate corridors for pipeline ROWs to the maximum extent possible.* Minimize the number, length, and footprint of oil and gas development roads* Use existing roads where possible* Combine utility infrastructure (gas, electric, and water) planning with roadway planning to avoid separate utility corridors* Combine and share roads to minimize habitat fragmentation* Where possible, consolidate pipeline and existing roadways, or roadways that are planned for development* Maximize the use of directional drilling to minimize habitat loss/fragmentation* Maximize use of remote telemetry for well monitoring to minimize traffic
2	Drilling/Completion Operations	<ul style="list-style-type: none">* Install and maintain adequate measures to exclude all types of wildlife (e.g., big game, birds, and small rodents) from all fluid pits (e.g., fencing, netting, and other appropriate exclusion measures).
3	Interim Reclamation	<ul style="list-style-type: none">* Remove well pad and road surface materials that are incompatible with post-production land use and re-vegetation requirements* Use only certified weed-free native seed in seed mixes, except for non-native plants that benefit wildlife* WPX Energy will use certified, weed free grass hay, straw, hay or other mulch materials used for the reseeding and reclamation of disturbed areas.* Install exclusionary devices to prevent bird and other wildlife access to equipment stacks, vents and openings.* Reduce visits to well-sites through remote monitoring (i.e. SCADA) and the use of multi-function contractors.* Avoid dust suppression activities within 300 feet of the ordinary high water mark of any reservoir, lake, wetland, or natural perennial or seasonally flowing stream or river where possible.
