COMMENTS:

In May of 2014 the Dilka 22-6 quit producing and casing pressure fell. We moved a workover rig on location and found a hole in the casign between 3,715' and 3,745' (isolated with plug and packer). See the attached WBD detailing the proposed cement squeeze to fix the hole. Casing pressure and reservoir pressure indicate the squeeze will need to pressure test to 1,500 psi or 500 psi on surface with a column of water.
