Subject: Elm Ridge IGW 154-Permit remedies

Hi Drew & Dave,

I am attaching the following:

1. Elm Ridge IGW 154_Incomplete.pdf-Original letter listing the permit deficiencies for the IGW 154 well that was drafted by Courtney.
2. Remedies for Insufficiencies.pdf-Narrative addressing the insufficiencies in the aforementioned letter.
3. ElmRidge_IGW_154_SSDS_20140702.pdf-Stormwater Plan from Amanda Blanchard/Ecosphere.
4. IGW 154 survey docs 7-8-14 (1).pdf-Revised survey showing new surface location (and pics taken during growing season for Form 2A).
5. IGW 154 County Permit page 1-revised.pdf-First page of permit to correct for new surface location coordinates.
6. ElmRidge_IGW_154-BMP map & appx sound wall placement.pdf-Revised BMP map correcting text orientation and showing appx location of sound walls/straw bales, if necessary, for noise abatement during drilling and subsequent to completion.

Dave, if this covers your requirements, would you mind confirming with Drew that GIS was used as the most accurate means available to determine distance from surface location to closest building unit?

I did not hear from Mrs. Moore on Monday regarding her availability to be present at her residence for an accurate measurement from the restaked well location to her home. I called her yesterday and left her a voicemail but received no reply.

I have received no word from our courier service as of today that our Pre-Construction Notice was successfully delivered. I will contact both you and Drew with any updated information.

Best regards,

Doug Joyce
