Brent,

No objection to proposed plugging changes to well API 123-07947.

Mark,

See attached CBL showing NB cmt top at 7028', SX coverage 4325' up to 3746' and three spots of bonding above 650' across Fox Hills.

Based on the CBL, a few changes are proposed to the approved Form 6, all volumes using approved blends for the NB, SX and FH depths.

1. NB coverage – shoot holes at 7010' and 6580' and pump 150 sks, leave 100' on CICR at +/- 6610'
2. SX coverage – CBL shows zone coverage behind pipe so we will set 50 sk plug inside the 4 ½" from 4425' up to 3725'
3. FH coverage – shoot holes at 610' and 410' and place 120 sks in annulus, spot 20 sks on top of CICR at +/- 440' up to 150'

Please indicate your concurrence.

Thanks,

Brent Marchant
