RECLAMATION

INTERIM RECLAMATION

Interim Reclamation will commence approximately _____

Per Rule 1003.e.(3) operator shall submit Sundry Notice reporting interim reclamation is complete and site is ready for inspection when vegetation reaches 80% coverage.

Interim reclamation complete, site ready for inspection. Per Rule 1003.e(3) describe interim reclamation procedure in Comments below or provide as an attachment and attach required location photographs.

Field inspection will be conducted to document Rule 1003.e. compliance

FINAL RECLAMATION

Final Reclamation will commence approximately _____

Per Rule 1004.c.(4) operator shall submit Sundry Notice reporting final reclamation is complete and site is ready for inspection when vegetation reaches 80% coverage.

Final reclamation complete, site ready for inspection. Per Rule 1004.c(4) describe final reclamation procedure in Comments below or provide as an attachment.

Field inspection will be conducted to document Rule 1004.c. compliance

Comments:

The area reclaimed on the well pad was seeded with Switchgrass, Dacotah (19.89%), Thickspike Wheatgrass Critana (19.78%), Western Wheatgrass, Arriba (14.73%), Big Bluestem, KAW (13.04%), Annual Ryegrass, Gulf (9.99%), Sideoats Grama, Native (9.68%), and Little Bluestem, Camper (7.59%). A vegetation survey was conducted at the site on June 15, 2014. The Kerr-McGee Oil and Gas Onshore LP (Kerr-McGee) survey method consisted of randomly selecting 20 survey points on the well pad and 20 survey points within a reference area representative of the pre-disturbance vegetative levels. A Daubenmire frame was placed at each random survey point and a percent cover analysis was performed on the vegetation (excluding noxious weeds) within the frame. The vegetation survey for the reference area resulted in an average vegetation cover of 23%. The vegetation survey for the reclaimed well pad area resulted in an average vegetation cover of 19%. The vegetation survey data indicates that the well pad vegetation cover is 82% of the pre-disturbance/reference area vegetation growth, which surpasses the required 80%. Based on the Kerr-McGee survey method, interim reclamation as defined in regulation 1003.e. (2) has been met at the above referenced location. Four photographs were taken facing each cardinal direction. A fifth photograph was taken to document the total cover of live perennial vegetation of the site. A sixth photograph was taken to document the representative vegetation cover of the adjacent or nearby undisturbed land. A copy of the vegetation survey is attached.
