Group	User	Comment	Date
OGLA	kubeczkod	<p>GENERAL SITE COAs:</p> <p>Operator must implement best management practices to contain any unintentional release of fluids, including any fluids conveyed via temporary surface pipelines or buried permanent pipelines.</p> <p>Reserve pit, or any pit used to hold fluids, if constructed, must be lined or a closed loop system (which operator has been indicated on the Form 2A) must be implemented during drilling.</p> <p>Operator must ensure 110 percent secondary containment for any volume of fluids contained at well site during drilling and completion operations; including, but not limited to, construction of a berm or diversion dike, diversion/collection trenches within and/or outside of berms/dikes, site grading, or other comparable measures sufficiently protective of nearby surface water. If fluids are conveyed via pipeline, operator must implement best management practices to contain any unintentional release of drilling, completion, or produced fluids.</p> <p>Flowback and stimulation fluids must be sent to tanks to allow the sand to settle out before the fluids can be placed into any pipeline or pit located on the well pad. The flowback and stimulation fluid tanks must be placed on the well pad in an area with additional downgradient perimeter berming. The area where flowback fluids will be stored/reused must be constructed to be sufficiently impervious to contain any spilled or released material.</p> <p>Berms or other containment devices shall be constructed to be sufficiently impervious to contain any spilled or released material around crude oil, condensate, and produced water storage tanks.</p>	05/30/2011

Storm Water/Erosion Control	<p>Stormwater Management will be managed under BOPCO, L.P. Stormwater Management Plan (SWMP), Yellow Creek Field, Rio Blanco County, Colorado, updated December 2010. The SWMP is covered under the CDPS large construction permit COR-030000.</p> <p>Prior to construction a stormwater "perimeter" will be built around the site for initial work purposes. Once the pad construction is completed, BOPCO, L.P. Stormwater Administrator will inspect the site and install any necessary Erosion Control Devices to manage sediment discharge from the pad. These devices may include but are not limited to:</p> <p>Rock Checks Dams, V- Ditches, Rock Armoring of Access Roads, Erosion Control Blankets, Straw Waddles, Silt Fencing Berm/Diversion, and Outlet Protection</p> <p>Once the final stormwater erosion control devices are installed they will be mapped in GIS and a diagram of the site will be drafted and included as part of the SWMP as required by the CDPHE General Permit.</p> <p>This site will be inspected every 14 days and 72 hours after any major storm event. These inspections will be recorded and documented in the SWMP onsite at the Yellow Creek Field gas plant. Any necessary repairs or modification will be made and documented in the SWMP. An updated site diagram will be included in the SWMP.</p>
