COMMENTS:

Beeman Oil & Gas, LLC respectfully requests approval to vent associated gas from the referenced well bore as an integral part of the ongoing oil production. This Sundry Notice provides additional details regarding Beeman's analysis of the economics of selling the gas produced by the wellfield that includes the Hubbs 1, Hubbs 2, Barbara 2, Gladys 1 and Gladys 2 wells. Details concerning the volume and quality of produced gas from these wells is contained in earlier Sundry Notices. The analysis hereby submitted clearly shows the negative economics of attempting to market the gas from these wells. This analysis evaluates the economics of constructing a pipeline connecting the 5 wells to the existing Red Mesa pipeline at the Haun-Delaney 1 well and selling the gas at market prices. The analysis clearly demonstrates that the project is un-economic with a significantly negative Net Present Value and a negative Internal Rate of Return. The wells are incapable of oil production without venting and will typically produce up to three days before oil production ceases. Wells are presently shut-in awaiting COGCC approval, expedited processing of this application is requested.
