Operator Comments:

The surface hole location for Federal 14/15-8-21 was moved to put all of the well heads in a single row and because the auger for the conductor casing rig broke off downhole. The initial auger hole was cemented tot he surface, the auger rig moved over and completed the conductor casing hole at the location shown on the attached revised well plat.

The bottom hole location did not change and the direction information did not change because the well is nearly a vertical well.

I hereby certify all statements made in this form are, to the best of my knowledge, true, correct, and complete.
