Describe what is known about the spill/release event (what happened -- including how it was stopped, contained, and recovered):

During swabbing activities, a flow line release was discovered adjacent to the separator at the UPRR 42 Pan Am X#1 production facility. Excavation of impacted material is ongoing at this time however, groundwater was encountered at approximately 4 feet below ground surface (bgs). A groundwater sample (GW01) was collected from the excavation and submitted to Origins Laboratory in Denver, Colorado for analysis of benzene, toluene, ethylbenzene, and total xylenes (BTEX). Analytical results returned on October 2, 2014 indicated that benzene concentrations in the groundwater sample are above applicable COGCC Table 910-1 standards, causing this release to be reportable to the State.
