Describe what is known about the spill/release event (what happened -- including how it was stopped, contained, and recovered):

Dump valves on separators stuck open, caused heater treater to fill with oil, oil was released in a mist through a pressure relief valve on top of the heater treater. Approximately 10 bbls of oil were released. Prevailing winds out of the north carried the mist to the south. An area approximately 50' wide by 100' long was impacted. Impacted soils were scraped up and hauled to Waste Management's Ault landfill for disposal. Confirmation sampling scheduled for 10/14/14.
