RE: Burton K25-69-1HNL Rule 317.p Exception Request

Dear Mr. Lepore,

Noble Energy Incorporated (NEI) would like to request an exception to Rule 317.p, requiring a minimum of a resistivity log with gamma-ray for a newly drilled well. The proposal is to use a log from a nearby well, Miller 25-4F. (05-123-16224)

The Burton K25-69-1HNL (05-123-38365) and Burton K25-68-1HNL (05-123-38367) are located on a two-well pad (location #434874). The Miller 25-4F (05-123-16224) is a Codell/Niobrara producing well. It was logged down to 7354 feet, which would include the Niobrara depth for the new well.

NEI feels this proposal of substituting the Miller log will satisfy the information for stratigraphic and aquifer data the Rule 317.p is trying to accomplish. A sundry, doc #400701399 submitted for this request.

I can be reached at (303) 228-4437 if you have any questions or concerns regarding this request.

Sincerely,

A handwritten signature in blue ink that reads 'Cheryl Johnson'.

Cheryl Johnson
