Describe what is known about the spill/release event (what happened -- including how it was stopped, contained, and recovered):

At approximately 7:30AM on Friday (October 24th, 2014), an Oxy contractor at the Central Water Handling facility noticed a produced water spill coming from a below ground 4" pipeline that connects the 1500 bbl tanks to a manifold. The pipeline was promptly isolated, preventing further leaking. No free liquids were captured. The leak and subsequent spill was contained within the Centralized Water Handling facility boundary.
