Thank you Bola:

Everything looks good. XTO can proceed with the proposed procedures, and I know the NOI Form 6 will be submitted as soon as feasible.

Regards,

Jay Krabacher

Good afternoon Jay. In reference to our earlier phone conversation, we are planning on moving forward with the plan to plug and abandon the Federal 84-15 (API#: 0510305171) well. The initial plan was to conduct MIT, however, hole was recognized in the production casing and leak was observed inside the cellar.

While we currently have the workover rig on the well, we will like to set the Cast Iron Cement Retainer within 100 ft above the topmost perforation. This will be our first isolation plug for the P&A exercise. We will rig off the well and seek internal approval to P&A, after gaining full approval, we will remobilize to the well and conduct the plug and abandonment.

We will be sending the Form 6 notice of intent shortly. I have attached a tentative P&A procedure for your review, please let me know if you accept the plan to set the cast iron cement retainer now and return to perform the P&A.

Regards
