Describe what is known about the spill/release event (what happened -- including how it was stopped, contained, and recovered):

On October 24, 2014, an Operator discovered that the packing around the cylinder on a glycol pump at Plant 3 of the Parachute Creek Gas Plant had broke and released approximately 100 gallons of ethylene glycol on the ground. The glycol pump was shutdown and the leak stopped. The contaminated soil was immediately cleaned up and placed in a lined containment, ready for disposal. The packing has been replaced and pump returned to service.

Environmental	There is no Table 910-1 standard for ethylene glycol. Remediate soil to CDPHE standard for groundwater protection of 70 mg/kg and submit confirmation sampling data from spill area. Provide documentation of contaminated soil disposal or remediation to <70 mg/kg. Provide supporting data in a Supplemental F-19 with a "Request for Closure" if cleanup standards have been attained.	10/27/2014 2:58:48 PM
