COMMENTS:

REM#8581.

The approved Form 27 proposed that samples be collected for TPHGRO/DRO/ORO, BTEX, RCRA 8 Metals, pH, SAR, and EC from untreated stockpiles, treated stockpiles, pit walls and pit floor. Whiting requests modifying the following sampling requirements:

1. Collection of pH, SAR, and EC samples from only the upper three feet (root zone) of material that is removed from each pit. The upper three feet of material is primarily topsoil that was used to cap the impacted material in the pits and will be removed, stockpiled and replaced at the surface of the pit.
2. Removal of RCRA 8 Metals from the sample list. Previous analytical results indicate metals concentrations similar to background levels. Backfilling of the pit is proposed to be based on meeting the BTEX and TPH levels listed in Table 910-1.
