Section 2: SE/4SW/4
Weld County, Colorado

Dear Director:

Kerr-McGee Oil & Gas Onshore LP (KMG) is making application for a drilling permit for the above captioned well. This permit is for a redrill in the exact location that the well was originally permitted for. While drilling the original well we encountered problems with the surface location. The surface location became unable for the rig to continue operations. KMG has gone back and corrected the surface problem. While correcting the surface problem it was determined that the well was drilled 18 feet from where it was supposed to be drilled.

Due to the circumstances listed above a new 20-day comment period would cause economic hardship as the spudder rig is scheduled to return to this pad on December 12th with the production rig arriving on December 27th.

As operator of the above referenced well KMG respectfully requests the Director to accept this operator request for expedited approval.

Very truly yours,

Kerr-McGee Oil & Gas Onshore LP
