Describe what is known about the spill/release event (what happened -- including how it was stopped, contained, and recovered):

A buried produced water pipeline failed resulting in a produced water spill. The discovery of the spill occurred when produced water migrated to the surface. The release was discovered by water management personnel when the fluids day lighted at the surface during a water transfer. 1 bbl of released fluid was recovered. The impacted area will be excavated and confirmation samples, for the spill remediation, will be collected at that time. None of the fluids have left the pad.
