Dan, I did not have a chance to get there this afternoon as I was sitting in a doctors office. Pioneer stated they had cleaned out particulates from the well whcih ends up with lots of air in the well bore. They were venting that air (oxygen) as the pipeline company will not accept gas with much oxygen in it. They told me they would put back to the pipeline anyway even if it caused troubles at the sales point.

Peter there is a large volume of something ( non-liquid) spewing from the well casing of the Parachute 34-25 , 071-08408. There is much concern for safety of man, beast and environment.
