**COMMENTS:**

As per Kerr-McGee Oil & Gas Onshore LP's (Kerr-McGee) approved Waste Management Plan for Land Application of Water-Based Bentonitic Drilling Fluids & Associated Drill Cuttings, the drill cuttings from the Bydalek 28C-20HZ, Bydalek 4N-20HZ, Bydalek 3N-20HZ, Bydalek 29C-20HZ, Bydalek 29N-20HZ, and Bydalek 30C-20HZ wells were land applied to the surface of the Bydalek 28C-20HZ well pad. The drill cuttings from the wells were mixed with EcoSponge bioremediation product and incorporated into the native soil during well pad reclamation activities. After final incorporation, a four point composite soil sample (Bydalek On Pad) was collected from 0-8 inches below ground surface (bgs) from the reclaimed well pad and submitted for laboratory analysis of total petroleum hydrocarbons (TPH), benzene, toluene, ethylbenzene, and total xylenes (BTEX), pH, electrical conductivity (EC), sodium adsorption ratio (SAR), total arsenic, total barium and arsenic by toxicity characteristic leaching procedure (TCLP). Four background soil samples (Bydalek Off (OA) through Bydalek Off (OD)) were collected from the undisturbed surface soil surrounding the well pad and submitted for laboratory analysis of total arsenic. The four background samples were also composited into one additional soil sample (Bydalek Off Comp) and submitted for laboratory analysis of pH, EC, SAR, total arsenic, and total barium. Laboratory results confirm that all concentrations and levels in sample Bydalek On Pad were within or below the Colorado Oil and Gas Conservation Commission (COGCC) allowable levels and/or below the site background levels. In addition, the TCLP arsenic concentration was below the laboratory reporting limit of 0.300 mg/L. Based on the laboratory results, Kerr-McGee is requesting a no further action (NFA) status for this well pad. The laboratory report is included as an attachment to this Form 4.
