Wildlife BMPs:

BMP Type	Comment
Planning	<ul style="list-style-type: none"> -When feasible, develop one unified separation and oil tank storage facility for multiple wells to reduce cumulative impacts, multiple facility footprints and adverse impacts on wildlife resources. -Plan for growth upfront in the design process such that tanks or water handling facilities can be added with minimal ground disturbance later in development or drilling progress.
Final Reclamation	<ul style="list-style-type: none"> -All surface restoration shall be accomplished to the satisfaction of surface owner. -All final seeding shall be done with grasses consistent with the Rocky Mountain native mix or other grasses reasonably requested by surface owner and during planting period suggested by surface owner. -Drilling pad size will be reclaimed to a simple vehicle turn-around area for daily maintenance of wells and pump jacks. -Final reclamation shall be completed to the reasonable satisfaction of the surface owner as soon as practical after installation (weather permitting) and in accordance with regulatory agency standards (BLM/COGCC).
Drilling/Completion Operations	<ul style="list-style-type: none"> -Light sources will be directed downwards and away from occupied structures during drilling operations. -Completion operations will be minimal as fracture stimulation is not necessary for our target formations in Adams and Washington County wells. -Noise and the numbers of days with equipment on site will be minimized due to completion techniques. -Once the drilling and completion rigs leave the site, there will be no permanently installed lighting on site.
Storm Water/Erosion Control	<ul style="list-style-type: none"> -Operator will make use of water bars, straw hay bales, gravel and other measures will be used to prevent erosion, storm water run-off and site degradation. -Co-locate gas and water gathering lines whenever feasible, and mitigate any erosion problems that arise due to the construction of any pipeline(s).
Site Specific	<ul style="list-style-type: none"> -The facilities separation & oil storage equipment plus evaporation ponds will be fenced to restrict public and wildlife access. This includes the facilities and evaporation ponds. -The well site locations, facilities and the roads will be kept free of noxious weeds, litter and debris. -Spraying for noxious weeds will be applied as needed. -Operator will manage all facilities such that secondary containment berms and evaporation ponds are within the specifications set forth in the COGCC rules. -Gates and fences will be constructed and maintained where necessary. -Any lease roads used by operator, its employees, or contractors will be graded and maintained such that water can drain properly.
Interim Reclamation	<ul style="list-style-type: none"> -Utilize existing pad areas and for temporary storage of equipment when possible such that any new well pads will have a reduced footprint. -Restore well site locations to their original condition within a reasonable time frame after the completion of operations. -All reseeding shall be done with grasses consistent with the Rocky Mountain native mix or other grasses reasonably requested by surface owner and during planting period suggested by surface owner.
Construction	<ul style="list-style-type: none"> -Remove only the minimum amount of vegetation necessary for the construction of roads, drilling pads, facilities and evaporation ponds. -Conserve topsoil during excavation and reuse as cover on disturbed areas to facilitate regrowth of vegetation. -No construction or routine maintenance activities will be performed during periods when the soil and or roads are too wet to adequately support construction equipment.

ACTION REQUIRED

ANY ACTION REQUIRED items listed on this report indicate that the oil and gas facility or the oil and gas operations listed on the report may be in violation of the rules and regulations of the Colorado Oil and Conservation Commission (“COGCC”) and corrective action is required.

There is reasonable cause to believe that a violation of the Oil and Gas Conservation Act, or of any rule, regulation, or order of the Commission, or of any permit issued by the Commission, has occurred. The Operator’s compliance with this Inspection Report is required to resolve these alleged violations. This document requires the Operator to timely respond to the COGCC and to comply with directives as listed by the **Corrective Action Deadline Date**. Failure to do so will result in the issuance of a Notice of Alleged Violation and initiation of enforcement proceedings in which COGCC will seek monetary penalties for the alleged violations pursuant to § 34-60-121, C.R.S. and Rule 523, COGCC Rules of Practice and Procedure, 2 CCR 404-1. (Please note that the COGCC's penalty authority was recently increased to a maximum of \$15,000 per day and penalties are no longer capped at a maximum of \$10,000 per violation.)
